Hobbies

- kitesurfing
- web app development

Profile

Clinical Technology bachelor student at TU Delft with a strong interest in medicine, neurotechnology, and software engineering. Experience with real time software systems, medical and biological data analysis, and integration of software with sensors and embedded hardware. Motivated to work on medical devices and brain computer interfaces that combine engineering with clinical application.

Education

Bachelor of Science in Clinical Technology

2022 - Present

TU Delft, Netherlands

focus on applying engineering to clinical problems, including neurotechnology, biomedical signal processing, electronics, embedded systems, and data analysis in medical contexts.

Employment

Surgical Robotics Internship

Present

Amphia Hospital, Netherlands

- Shadowed 18 surgical procedures, including 12 robotic assisted surgeries using the Da Vinci system.
- Practiced on Da Vinci simulation systems to gain insight into how surgeons experience robotic assisted procedures.
- Observed human machine interaction, safety requirements, and real time decision making in the operating room.

Project Experience

Biological Signal and Medical Data Analysis

- Analyzed DNA sequencing data from over 20000 cancer patients using clustering methods to identify breast cancer subgroups based on BRCA gene expression, and developed rule based MRI tumor detection pipelines with robust preprocessing for noisy medical data.

Wearable Balance Tracking Sensor

- Built a sensor based balance measurement system using Raspberry Pi to collect and process motion data, quantifying upper body stability and movement patterns in older patients.

Happie Dinner Planning App

- Built and deployed a real time group based dinner planning application with synchronized multi device state, handling concurrency, low latency updates, and early scaling, tested in over a dozen student houses.

Humanitarian Engineering

Community Clean Up Initiative

[Epukiro, Namibia.](#)

Implemented a community cleanup initiative that links waste collection to food support for local residents and has remained active for over three years.

The Farm Orphanage

[Gordons Bay, South Africa.](#)

- Led technical coordination and website development to support daily operations.
- Helped design and implement new revenue generating initiatives to improve long term financial sustainability of the farm.

Volunteer Experience

Wildlife conservation work in central Namibia

Worked with animals unable to return to the wild due to prolonged exposure to humans.

Medical outreach support in eastern Namibia

Volunteered in a hospital in Epukukiro supporting the underserved San community for over two and a half months.
